

The Future of Building is Green
Does your New LEED® Building have the
Green Advantage®?

Put Green Advantage® Certified Practitioners on Your Team Today!

*** Builders * Developers * Contractors *
Subcontractors * Construction Trades * Suppliers**

Approximately **25 states** have passed or are considering legislation that would require government-funded projects to meet the U.S. Green Buildings Council's LEED® Building standards. **48 cities**, including New York, Los Angeles and Chicago also have adopted LEED® standards.

Green building will continue to gain momentum as \$200 billion a year is generated from government-financed construction projects, from schools to courthouses to hospitals. The impact could be even greater if the standards become part of building codes, and thus mandatory for private-sector projects such as offices, shopping malls and houses. More than \$1 trillion is spent on construction each year in the U.S., according to the Commerce Department. So, **Get trained. Get certified. Get the Green Advantage!**

Attend Green Advantage Training

Date: April 30, 2009

**Location: Georgia Trane
2677 Buford Highway. N.E.
Atlanta, Georgia 30324**

Exam: May 12, 2009

Green Advantage®—The Environmental Certification program staffs your project with construction personnel who have demonstrated their knowledge in green building practices and LEED®. Equipping your LEED® team with Green Advantage® certified personnel qualifies for one very important LEED® Innovation Credit.

For more information and workshop registration visit: www.greenadvantage.org, or call 215.428.9655.

Green Advantage® Commercial Training is recognized as an USGBC Educational Provider. It is not affiliated with any LEED® product or training. Practitioners interested in LEED accreditation or training should look for classes that are specifically sanctioned by the USGBC.
